1 Liberty Create Builder Essentials - Level 2

(2 days)

Course Overview

Course Description:

Delegates that attend this two-day course will build on the topics and functionality covered on the Builder Essentials Level 1 course. This session will help to consolidate their knowledge of the Liberty Create platform as well as showing attendees how to utilise more of the platform's functionality.

Prerequisites:

Attendees of this course must have attended the **Liberty Create Builder Essentials Level 1 course and passed certification** to have a good understanding of the fundamentals of how applications are built in the platform.

Target Audience:

Anyone who needs to build upon their existing knowledge of using the Liberty Create platform to create more functional applications.

Learning Objectives:

On completion of this course and upon expanding on the case study used during the Builder Essentials Level 1 course, attendees will be able to use the Liberty Create platform to:

- Create a Triage process utilising Public & Authenticated Webpages
- Create and use more complex Composites and Subsets
- Expand upon the uses for Rules and Events
- Create a mobile orientated interface and access it via the Liberty Create App
- Make use of Remote Objects
- Understand the use of Templates and more complex options when creating communications

Course Structure:

This is an instructor led classroom course for groups of up to a maximum of 8 attendees and involves a combination of presentation, guided exercises and assignments. Over the 2 days, attendees will be introduced to additional capabilities of the Liberty Create platform. By the end of the course, attendees will have expanded on the Helpdesk application created in the previous session, to build a fully functioning application that incorporates the Liberty Create functionalities mentioned above.

Agenda

- Creating a triage process utilising public & authenticated webpages
- Creating and using Sub Pages within an interface
- Utilising the Booking functionality
- Creating Dynamic Relationships
- Creating and using complex Subsets
- Creating and using Composites based on
 - Multiple text fields
